

HIT THE GROUND RUNNING WHEN YOU HIT THE REAL WORLD WITH LEAN TRAINING

You know you need all the extra training you can get if you're going to compete in a challenging job market. And for today's industrial engineer, lean training is mandatory for success. IISE has the lean training you need to get you prepared to hit the ground running when you hit the real world.

Learn how to structure an organization to support and continuously improve a lean process in IISE's Lean Green Belt course. As a Lean Green Belt, you will be equipped to map process flow and identify activities that add value from a customer's perspective.

- Topics covered include 5S and muda, value stream mapping, point of use, SMED, pull, seven wastes, visual workplace and more.
- IISE instructors have had years of experience applying these methods to real processes ranging from manufacturing to healthcare to financial services to government.
- The course is shorter than many other Green Belt courses because we include only the tools and information necessary for immediate application. Get what you need in three days of classroom training instead of dawdling over an online course for weeks as you try to make time for it.
- At the end of the course, take the IISE Lean Green Belt Exam (included in the course fee). Participants who pass the exam receive the IIE Lean Green Belt.
